

# BeagleBone Cookbook Webinar Series

## Recipe #5

### I/O with C and mmap()

December 1, 2015

Jason Kridner

Co-author of BeagleBone Cookbook

Board member at BeagleBoard.org Foundation

Sitara Applications Engineering at Texas Instruments

# BeagleBone Black

## Ready to explore and use in minutes

Truly flexible open hardware and software development platform

All you need is in the box

Proven ecosystem from prototype to product

- Ready to use
  - USB client network
  - Built-in tutorials
  - Browser based IDE
  - Flashed w/Debian
- Fast and flexible
  - 1-GHz Sitara ARM
  - 2x200-MHz PRUs
  - 512-MB DDR3
  - On-board HDMI
  - 65 digital I/O
  - 7 analog inputs
- Support for numerous Cape plug-in boards

<http://beaglebonecapex.com>

**BeagleBone Black** – the most flexible solution in open-source computing

# BeagleBone Black board features

## 10/100 Ethernet

## USB Host

Easily connects to almost any everyday device such as mouse or keyboard

## microHDMI

Connect directly to monitors and TVs

## microSD

Expansion slot for additional storage

## 512MB DDR3

Faster, lower power RAM for enhanced user-friendly experience

## Serial Debug

## DC Power

## Expansion headers

Enable cape hardware and include:

- 65 digital I/O
- 7 analog
- 4 serial
- 2 SPI
- 2 I2C
- 8 PWMs
- 4 timers
- And much much more!

## 1-GHz Sitara AM335x ARM® Cortex™-A8 processor

Provides a more advanced user interface and up to 150% better performance than ARM11

## Power Button

## LEDS

## Reset Button

## USB Client

Development interface and directly powers board from PC

## 4-GB on-board storage using eMMC

- Pre-loaded with Debian Linux Distribution
- 8-bit bus accelerates performance
- Frees the microSD slot to be used for additional storage for a less expensive solution than SD cards

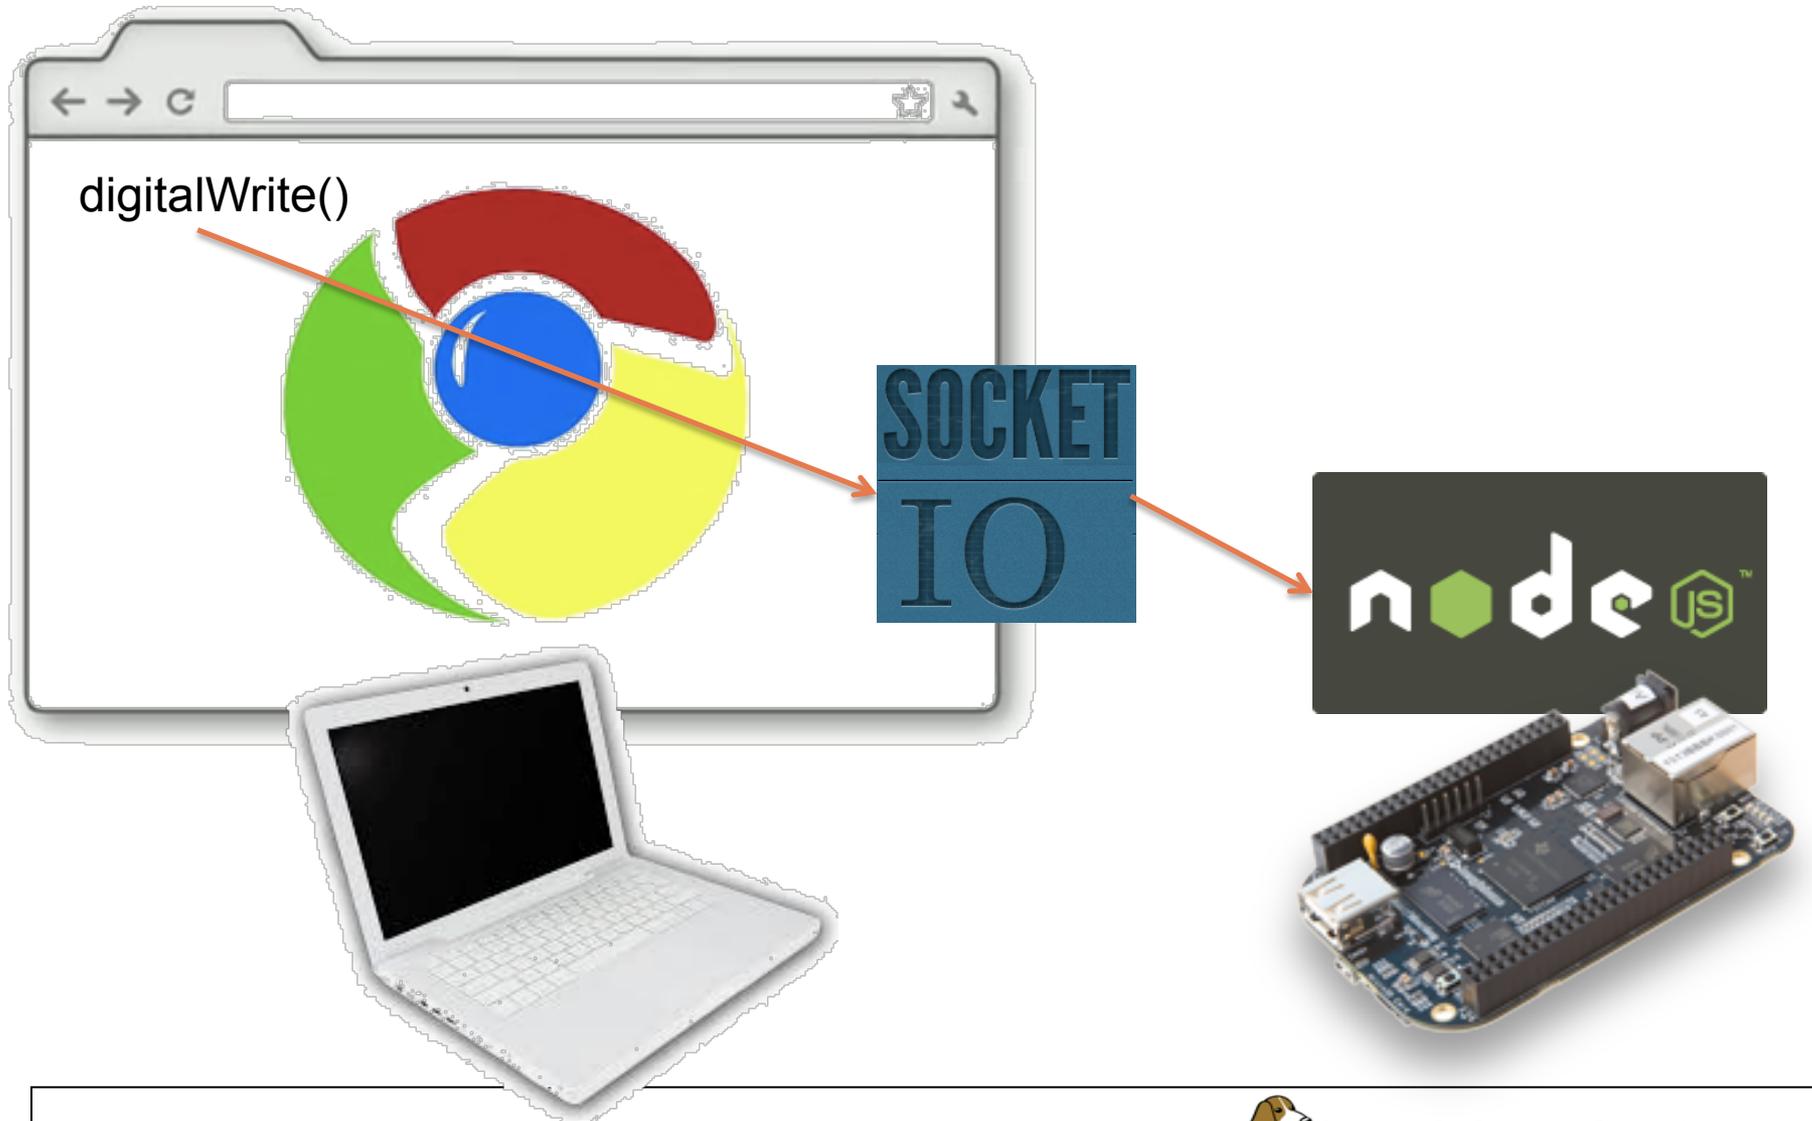

## Boot Button

## Money saving extras:

- Power over USB
- Included USB cable
- 4-GB on-board storage
- Built-in PRU microcontrollers

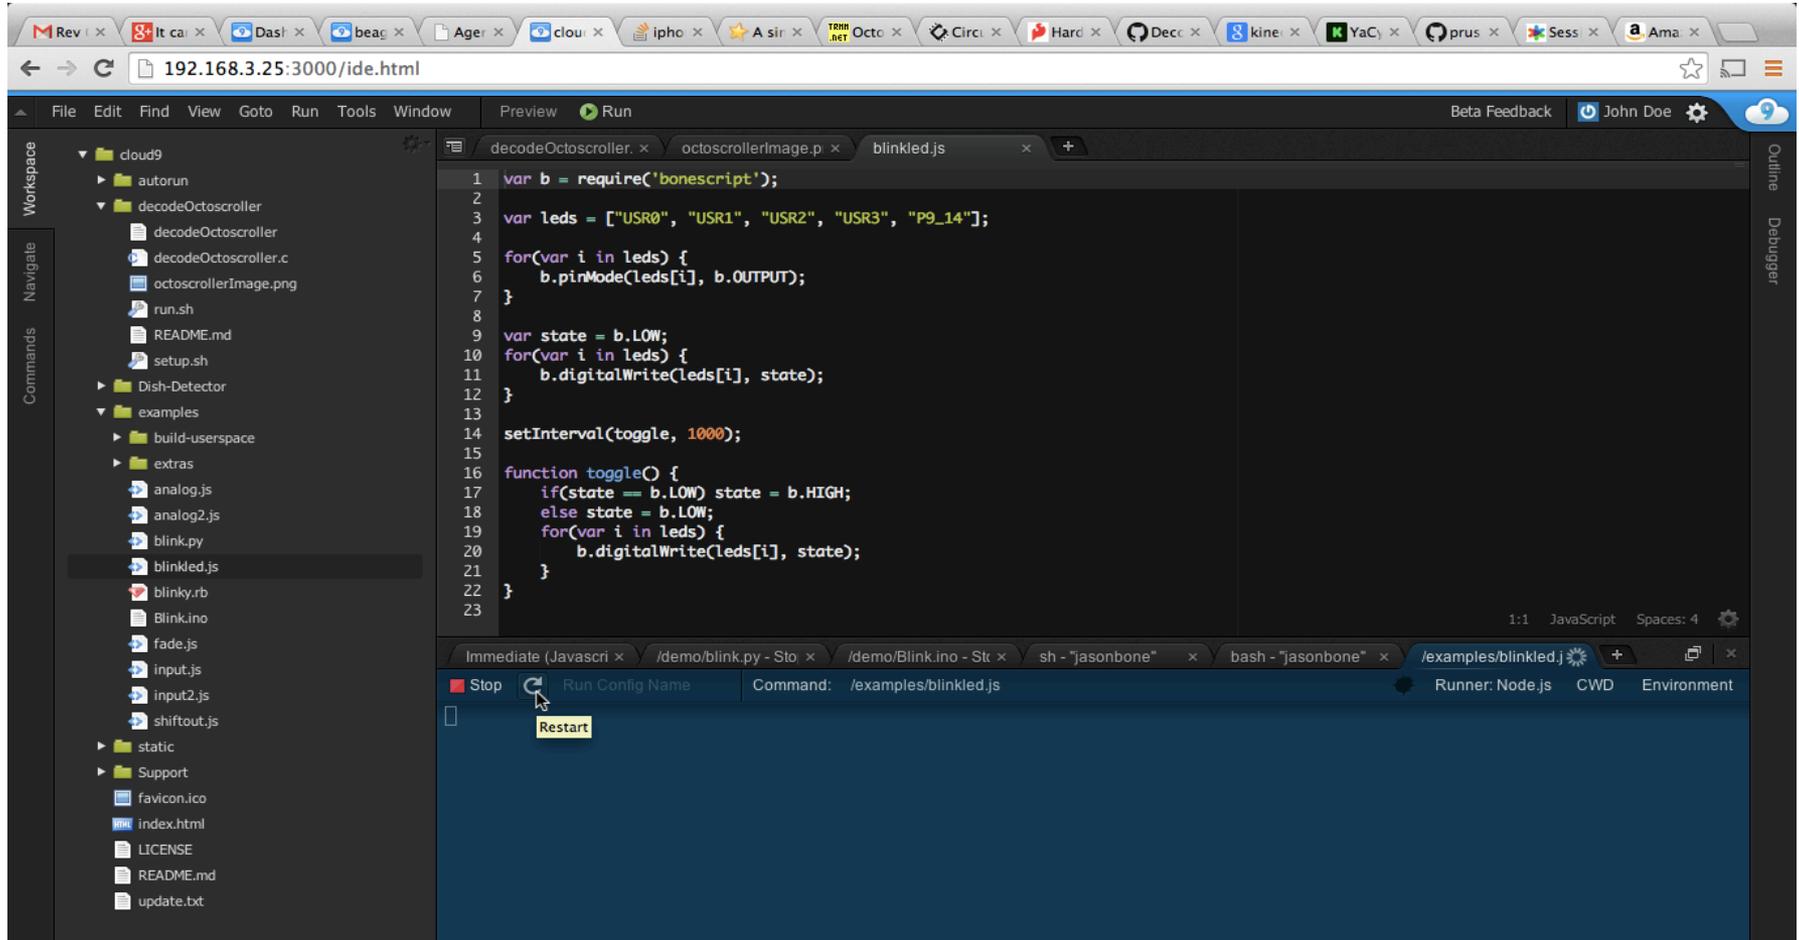

# Simple browser-based interactions

<http://beagleboard.github.io/bone101>

# Cloud9 IDE hosted locally

## Zero install and exposes command-line

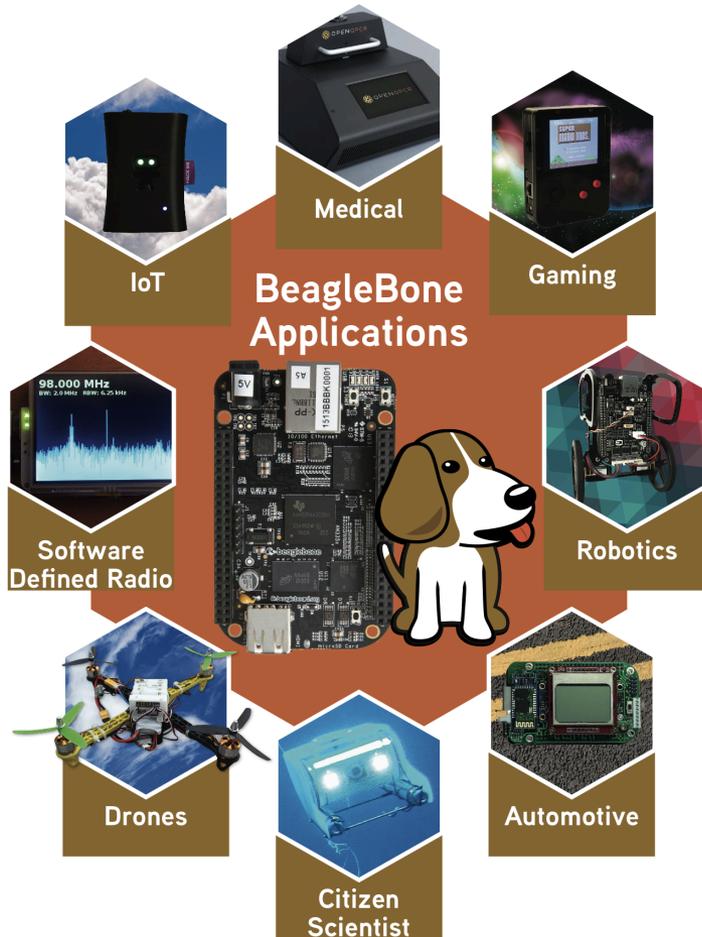

The screenshot displays the Cloud9 IDE interface in a web browser. The address bar shows the URL `192.168.3.25:3000/ide.html`. The interface includes a menu bar (File, Edit, Find, View, Goto, Run, Tools, Window), a toolbar with 'Preview' and 'Run' buttons, and a user profile 'John Doe'. On the left, a 'Workspace' sidebar shows a file tree for a project named 'cloud9', with 'examples/blinkled.js' selected. The main editor area displays the following JavaScript code:

```
1 var b = require('bonescript');
2
3 var leds = ["USR0", "USR1", "USR2", "USR3", "P9_14"];
4
5 for(var i in leds) {
6   b.pinMode(leds[i], b.OUTPUT);
7 }
8
9 var state = b.LOW;
10 for(var i in leds) {
11   b.digitalWrite(leds[i], state);
12 }
13
14 setInterval(toggle, 1000);
15
16 function toggle() {
17   if(state == b.LOW) state = b.HIGH;
18   else state = b.LOW;
19   for(var i in leds) {
20     b.digitalWrite(leds[i], state);
21   }
22 }
23
```

At the bottom, a terminal window is open with the command `/examples/blinkled.js` and the runner `Node.js`. The terminal shows a 'Stop' button and a 'Restart' button.

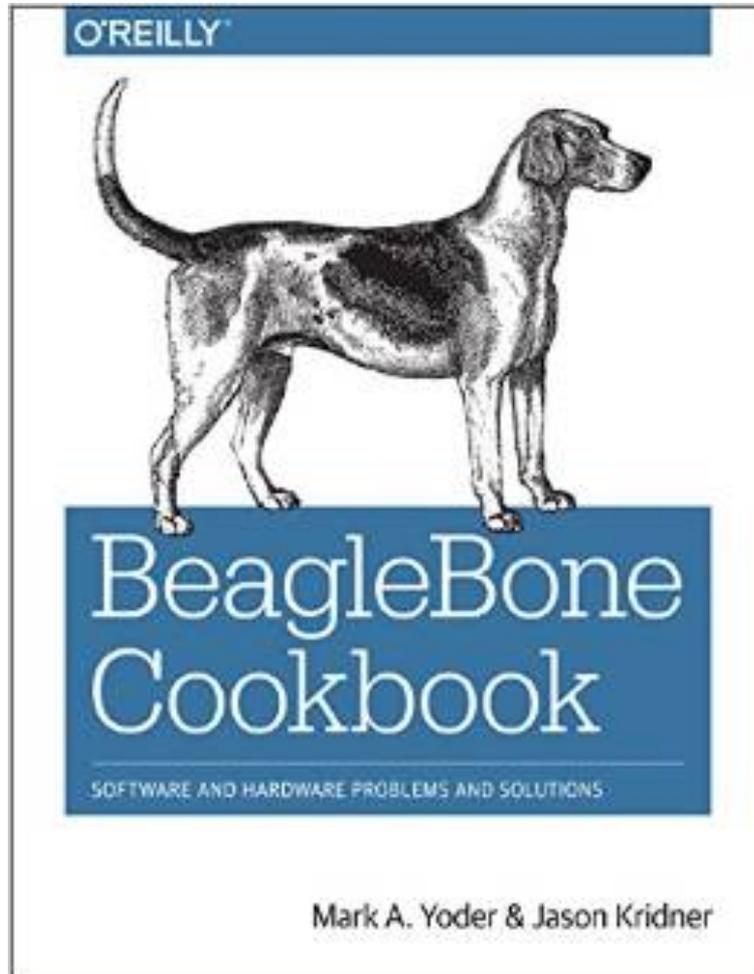

# 10,000s of developers building connected devices today

- Medical analysis, assistance and information management
- Home information, automation and security systems
- Home and mobile entertainment and educational systems
- New types of communications systems
- Personal robotic devices for cleaning, upkeep and manufacturing
- Remote presence and monitoring
- Automotive information management and control systems
- Personal environmental exploration and monitoring

# BeagleBone Cookbook

<http://beagleboard.org/cookbook>

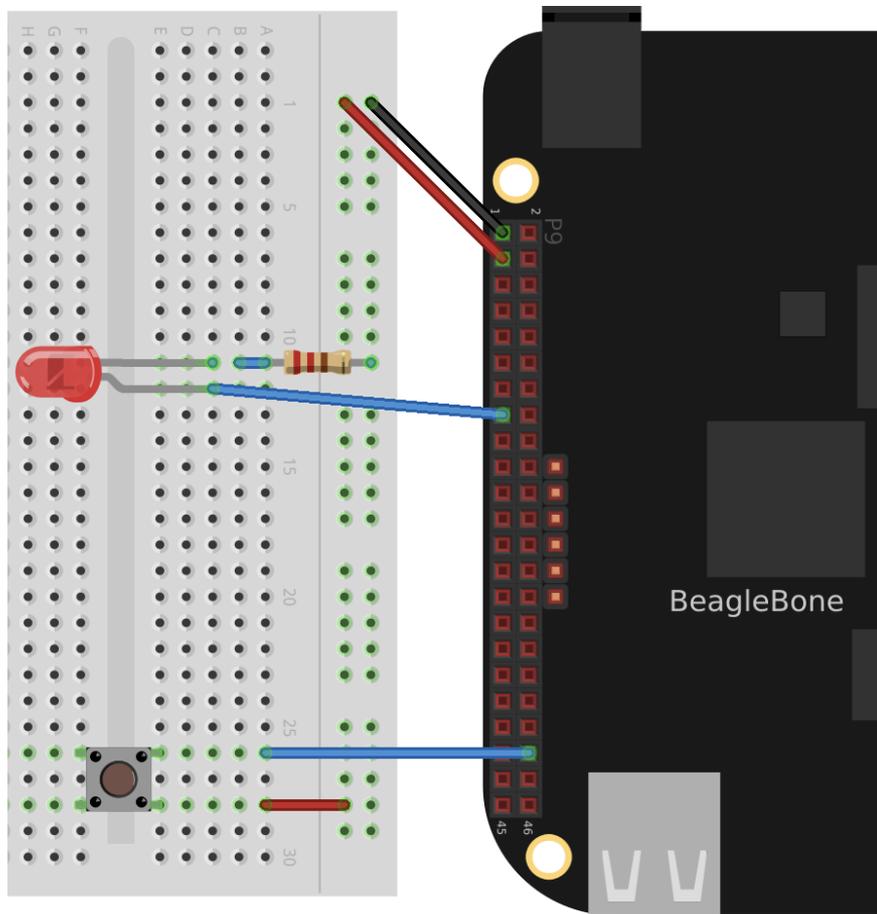

- 99 recipes covering
  - Basics
  - Sensors
  - Displays and outputs
  - Motors
  - Internet of things
  - Kernel
  - Real-time I/O
  - Capes

# Prerequisites

- Connect to the board per recipe 1.2
  - <http://beagleboard.org/getting-started>
- Verify the software image per recipe 1.3 and potentially updating per recipe 1.9
  - <http://beagleboard.org/latest-images>
- Components
  - BeagleBone Black
  - Push button or 3.3V function generator
  - Jumper wire
  - LED with resistor or (preferred) oscilloscope

# Connect a button and an LED

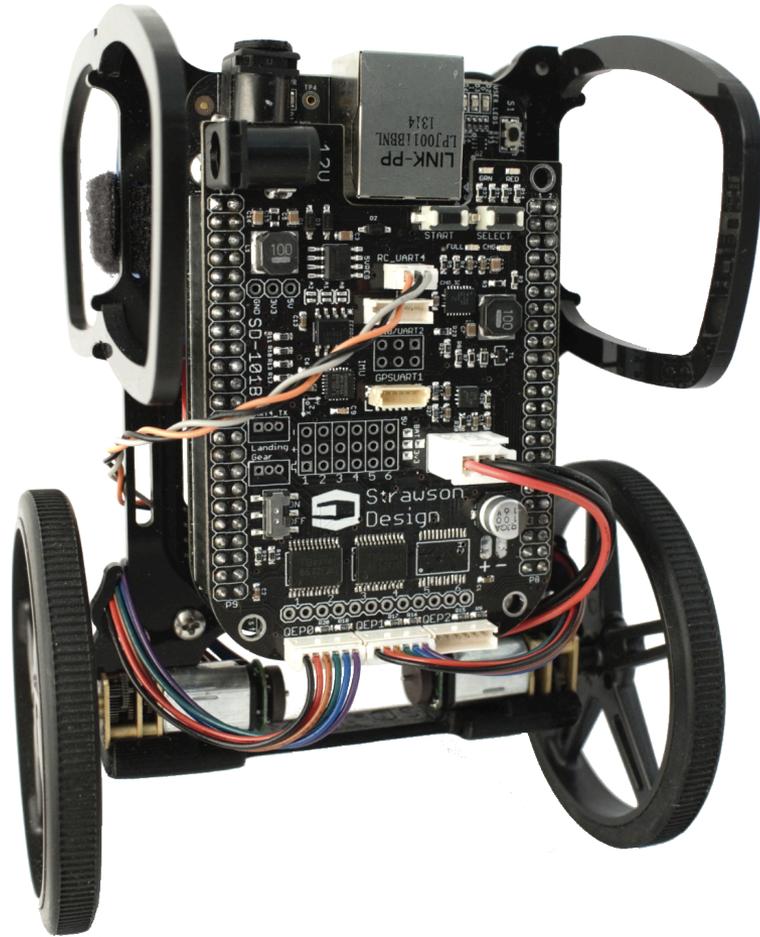

<http://beagleboard.org/Support/bone101/#headers-gpio>

P9			
DGND	1	2	DGND
VDD_3V3	3	4	VDD_3V3
VDD_5V	5	6	VDD_5V
SYS_5V	7	8	SYS_5V
PWR_BUTTON	9	10	SYS_RESETN
GPIO_30	11	12	GPIO_60
GPIO_31	13	14	GPIO_50
GPIO_48	15	16	GPIO_51
GPIO_5	17	18	GPIO_4
I2C2_SCL	19	20	I2C2_SDA
GPIO_3	21	22	GPIO_2
GPIO_49	23	24	GPIO_15
GPIO_117	25	26	GPIO_14
GPIO_115	27	28	GPIO_113
GPIO_111	29	30	GPIO_112

AIN0	39	40	AIN1
GPIO_20	41	42	GPIO_7
DGND	43	44	DGND
DGND	45	46	DGND

Input on GPIO\_7 and output on GPIO\_31

# Understanding Real-Time

- Throughput vs. latency
- Hard, soft and firm
- Context switching
- Task scheduling
- Linux RT\_PREEMPT
- Using 'strace' and 'oprofile'

# What are /dev/mem and mmap()?

- /dev/mem is a character device that is an image of the main physical memory of the computer
- mmap() is a system function to map devices into (virtual) memory
- Together, they can be used to provide an application that has only a virtual memory space with access to specific physical addresses
- Directly accessing the registers bypasses system calls and avoids context switches
- This is really just a step towards writing your own device driver

# Recipe 8.4: I/O with devmem2

```
bone# wget http://free-electrons.com/pub/mirror/devmem2.c
bone# gcc -o devmem2 devmem2.c && mv devmem2 /usr/local/bin/
bone# ln -s /sys/class/gpio
bone# echo 31 > gpio/export
bone# echo out > gpio/gpio31/direction
bone# echo 1 > gpio/gpio31/value
bone# echo 0 > gpio/gpio31/value
bone# devmem2 0x44E07138
bone# devmem2 0x44E07190 w 0x80000000
bone# devmem2 0x44E07194 w 0x80000000
bone# devmem2 0x44E07138
```

# Recipe 8.4: I/O with C and mmap()

```
bone# wget
```

```
https://raw.githubusercontent.com/BeagleBoneCookbook/firstEdition/  
master/08realtime/pushLEDmmap.c
```

```
bone# wget
```

```
https://raw.githubusercontent.com/BeagleBoneCookbook/firstEdition/  
master/08realtime/pushLEDmmap.h
```

```
bone# gcc -O3 -o pushLEDmmap pushLEDmmap.c
```

```
bone# ./pushLEDmmap
```

```
^C
```
